March show highest monthly spikes follow by January, August & December — indicating these months need extra security monitoring.

March recorded the highest incidents at 8.6K and February the lowest at 7.9K — showing seasonal attack patterns.

All 8 attack types show nearly equal distribution around 12.5% each — meaning no single attack type dominates.

"Average severity score is 5.50 out of 10 — indicating that most attacks fall in the Medium to High threat range."

## Avg Response Time by Location

## Key Insights

- India and USA recorded the highest number of cyber attacks — making them the most targeted countries globally.
- Average response time across all locations is 90 minutes — which is 30 minutes above the target of 60 minutes.
- Quarantine and Patch are the most used mitigation methods — showing teams prefer containment over permanent fixes.

## Platform Risk Level

## Industry Risk Analysis

## ANOMALY DETECTED

Overall TSI Score of 5.21 confirms HIGH threat level — immediate security measures needed across all industries.

SLA Compliance rate shows average response time is 90 minutes — 30 minutes above the 60-minute target benchmark.

50% of all attacks were successfully stopped — meaning security teams need to improve detection for remaining 50%.
